

sanoLiving IQ

We take women's health seriously.

See what matters before she walks in.

sanoLiving IQ turns her health history, assessments, biomarkers and clinical records into patient-specific decision support, grounded in women's health evidence and guidelines.

It surfaces what may be connected, what has changed, what deserves attention and the evidence behind it, so the visit is spent deciding what to do next.

HOW IT WORKS

Her complete picture
history, assessments, biomarkers, medications, records

sanoLiving IQ
patterns, risks and the evidence behind them

You
review, question, decide

Her plan
in your EMR, with your sign-off

Not another medical search tool. **sanoLiving IQ doesn't start with a question. It starts with your patient.**

Why clinicians use it

Patterns and risks, ahead of time

Connects what may be related across PMOS, endometriosis, perimenopause, menopause, and weight management, and surfaces cardiovascular, metabolic, bone and mental health risks that may warrant attention.

Ask why, compare options

Ask why one option over another, add information and compare alternatives with medication risk stratification. Every recommendation is linked to its evidence, from 2,000+ expert papers and clinical guidelines.

See change over time, at a glance

Biomarkers and assessments side by side, so trends surface without digging through the chart.

You stay in charge

sanoLiving IQ recommends, you decide. Nothing reaches a patient without your sign-off. Works in your EMR/HER.

What your patients get

Prepared, and heard

She has told her story once, in her own words, and feels understood from the first visit.

A plan built around her whole health

She leaves with a plan that reflects her life and history, with risks identified early enough to act on.

Security and governance, built in

sanoLiving Shield

Masks personal health information before the AI processing. Identity stays in your EMR/EHR.

Independently security tested

Outside specialists tested it the way an attacker would. Every finding fixed.

ISO/IEC 42001

The standard for responsible AI. Internal audit complete, external audit underway.
